

Capstone Project 1

03-10-2019

R. Raval

Overview

Capstone Project is to see if there is a correlation between student SAT scores and different aspects of students' backgrounds.

Ideas:

1. School and SAT score. Does the particular school(eg. Private vs public school) correlate to a student's SAT score and acceptance into college?

- 
2. Economic background and SAT score. Does the student's economic background correlate to a higher or lower SAT score?
 3. Location and SAT score. Does where a student lives show any trends or correlations on a student's SAT score?
 4. Data from data.gov(SAT scores and schools/district),
collegescorecard.ed.gov/data/(SAT scores and colleges data),
And bls.gov(data of area vs socio-economic background/salary).
